EXPERIENCE

HNG, remote

July 2024 - Date

- Led a team of 20 developers through the course of building a web application from concept to launch using (Nextjs, Typescript).
- Conducted code reviews, managed pull requests, and maintained the repository, ensuring that code meets quality standards.
- Implemented Axios API instance, for API consumption, ensuring consistent headers, tokens, and settings across all API requests.
- Developed service classes for CRUD operations between the Next.js frontend and Node.js backend, facilitating easier scaling while keeping CRUD methods encapsulated.

E-process consulting, Lagos

August 2023 - January 2024

- Developed a script to automate customer email gathering using (python), reducing human error by 90% and increasing sales by 4%.
- Built and optimized the internal website, centralizing important documents for easy staff access.

EDUCATION

Air Force Institute Of Technology, Kaduna — BSc Computer science

April 2022 - Present

PROJECTS

WorkerHub — Personal project

A web app designed for efficient worker management, similar to DevLinks but tailored for professionals. WorkerHub allows users to manage profiles, tasks, schedules, and documents in one customizable platform. Built with Next.js for a dynamic frontend, the app integrates seamlessly with a BAAS for robust data management. The platform offers easy management of tasks, schedules, and work-related documents, enabling workers to stay organized and productive.
